Inventory Adjustments

Odoo 19 Enterprise · Inventory

Inventory adjustments correct stock levels when physical counts differ from what Odoo shows.

1 Physical inventory count

[Inventory](#) · [Operations](#) · **Physical Inventory**

Physical Inventory shows all products with their theoretical on-hand quantity (what Odoo shows) and a Counted Quantity column for you to fill in. Enter the actual counted quantity for each product. Products with differences are highlighted. Click Apply All to post the adjustment entries.

2 Inventory adjustment

[Inventory](#) · [Operations](#) · **Inventory Adjustments**

For ad-hoc adjustments to individual products, use Inventory Adjustments. Select the product, location, lot (if applicable), and enter the new on-hand quantity. The difference is posted as a stock adjustment entry to the inventory loss/gain account in accounting.

Scheduled counts · Schedule regular cycle counts rather than a full annual physical. Use inventory count plans in Inventory · Configuration · Inventory Count Plans to set different count frequencies per product category · fast-moving items monthly, slow-moving items quarterly.
